

What volume of **flammable substances** can I store **indoors**?

Is **ventilation required**?

Why do I need a **sump** and **what size** should it be?

What's the difference between **COSHH cabinets** and **EN14470 cabinets**?

Do I need to **segregate different families** of **chemicals**?

LEARN EVERYTHING YOU NEED TO KNOW IN OUR FREE COURSE – NEW CONTENT EACH MONTH

The storage and handling of hazardous materials has many associated risks. However, the use of hazardous and flammable materials is part of the daily routine in many workplaces and safety should be of paramount importance. As the leading manufacturer of hazardous material storage solutions, our goal is to raise awareness of all current standards such as EN14470-1/-2 and drive the standards of tomorrow.

With this in mind, we have created a free educational guide to offer you the best support possible. By signing up to this campaign you will receive monthly content that will ultimately enable you to decide on the correct storage to solve your storage issues. This will include: downloadable guides and charts; participation in webinars; invitations to live experimental lectures; DSEAR Regulations and much more. The course will conclude with a summary of the key learning points and a free-to-enter prize draw as part of your registration.

WHAT TO EXPECT FROM THIS CAMPAIGN?

February: Hazardous materials – definition and terms

How to define and identify these substances? Understanding the Globally Harmonised System (GHS) of labelling. Specific focus on flammable liquids – What is the flash point? Why are auto-ignition points important? What are explosion limits? And much more...

March: UK Legislation

Learn about the key regulations governing the indoor storage of flammable materials. Our experts will guide you through DSEAR 2002, HSG140, HSG71 and HSG51.

Obtain your Special Invitation to our upcoming Live Lectures at The NEC, Birmingham.

April: Revision

Take the test! Participate in our quiz to see how much knowledge you have collected in the first two guides.

Having secured your invitation, visit us at the Fire Safety Show in Birmingham from the 28th-30th April 2020. Join our live lectures where you will experience the behaviour of flammable liquids, learn about the various sources of ignition and find out how to take protective and preventive action. At our stand you can meet the Team behind the campaign and discover suitable, safe storage solutions for flammable liquids and other hazardous materials.

May: Understanding Safety Data Sheets and performing Risk Assessments

Safety Data Sheets are a vital source of information for many employees but the many different sections can be confusing. We will provide an easy to follow guide to aid your understanding and make sense of each section. Furthermore, you will learn more about the need for risk assessments and how the STOP principle applies within the scope of these.

June: Centralised and decentralised storage and classification of hazardous materials

What are the advantages / disadvantages of centralised and decentralised storage? By using the information gathered in your risk assessment, you can determine the best storage solution for you. But are your hazardous materials compatible with each other? We will provide valuable guidance on chemical compatibility and chemical segregation.

July: Storage of flammable liquids in fire-resistant safety storage cabinets

Learn about the options for decentralised storage and determine the safest available solutions. What are the current manufacturing standards for safety storage cabinets and do all the market options meet these standards? What is Type 90 technology and how can it protect your staff, your visitors and ultimately, your business?

August: asecos academy

Become familiar with the asecos academy, our learning platform that offers training and seminars on topics related to hazardous materials storage and handling. To support the academy, we publish technical literature, guidance videos and brochures aimed at different applications and target groups. Learn how to utilise the academy programme and associated literature to develop a sound knowledge base.

September: Extraction & Ventilation Requirements – DSEAR 2002 Legislation

Why should you consider extraction as part of your storage solutions? In this month's guide we will provide detailed information on this and the associated guidance within the DSEAR 2002 Regulations. What extraction solutions are available and how do you determine the best options for you?

October: Service and Maintenance

Why is service and maintenance important? What are the consequences of improper maintenance? We want to ensure your on-going safety so this month we will answer these questions and help you to determine the best service solution for your equipment.

November: Frequently Asked Questions

As we approach the end of the campaign, we want to hear from you. Send us the questions that have emerged from your learning during this course. These questions will then be addressed in a webinar so everyone can benefit from the answers.

December: Summary

To conclude the campaign, you will receive a summary of the course plus useful takeaways and guides. We will provide details of the best ways to engage with asecos and your local representatives, how to access our services to provide site surveys and storage solutions, or arrange tailor-made training courses that suit your needs.

Prize Draw:

During December our lucky prize draw winners will be announced and the following prizes awarded:

- 1st prize** A DSEAR Training Course provided by an Industry Expert
- 2nd prize** A £500 Voucher against your next order of an asecos Type 90 Safety Storage Cabinet
- 3rd prize** A £200 Voucher for a Set of Safety Containers
